

2021/0201(COD)

8.2.2022

AMENDMENTS

256 - 505

Draft report

Ville Niinistö

(PE699.175v01-00)

Amending Regulations (EU) 2018/841 as regards the scope, simplifying the compliance rules, setting out the targets of the Member States for 2030 and committing to the collective achievement of climate neutrality by 2035 in the land use, forestry and agriculture sector, and (EU) 2018/1999 as regards improvement in monitoring, reporting, tracking of progress and review

Proposal for a regulation

(COM(2021)0554 – C9-0320/2021 – 2021/0201(COD))

Amendment 256
Manuel Bompard

Proposal for a regulation
Recital 12

Text proposed by the Commission

Amendment

(12) Discontinuing the current accounting rules after 2025 creates a need for alternative provisions for natural disturbances such as fire, pest, and storms, in order to address uncertainties due to natural processes or as a result of climate change in the land use, land use change and forestry sector. A flexibility mechanism linked to natural disturbances should be available to Member States in 2032, provided that they have exhausted all other flexibilities at their disposal, put in place appropriate measures to reduce the vulnerability of their land to such disturbances and that the achievement by the Union of the 2030 target for the land use, land use change and forestry sector is completed.

Amendment 262

César Luena, Javi López, Nicolás González Casares, Estrella Durá Ferrandis, Marcos Ros Sempere

Proposal for a regulation

Recital 12

Text proposed by the Commission

(12) Discontinuing the current accounting rules after 2025 creates a need for alternative provisions for natural disturbances such as fire, pest, and storms, ***in order*** to address uncertainties due to natural processes or as a result of climate change in the land use, land use change and forestry sector. A flexibility mechanism linked to natural disturbances should be available to Member States in 2032, provided that they have exhausted all other flexibilities at their disposal, put in place appropriate measures to reduce the vulnerability of their land to such disturbances ***and that the achievement by the Union of the 2030 target for the land use, land use change and forestry sector is completed.***

Amendment

(12) Discontinuing the current accounting rules after 2025 creates a need for alternative provisions for natural disturbances such as fire, pest, and storms, ***and extend the concept*** to address uncertainties ***and foreseen impacts*** due to natural processes or as a result of climate change in the land use, land use change and forestry sector. A flexibility mechanism linked to natural disturbances, ***natural processes or as a result of climate change*** should be available to Member States in 2032, provided that they have exhausted all other flexibilities at their disposal, put in place appropriate measures to reduce the vulnerability of their land to such disturbances, ***natural processes or as a result of climate*** change.

Or. en

Justification

Natural disturbances definition contained in the text must change and expand the concept to adapt to the original text proposed by the Commission. Access to this flexibility and possible use cannot be conditional on the fulfilment of the EU target. This prevents member states from any type of planning, as it's beyond their control and, furthermore, can only be activated at the end of the period, creating a high level of uncertainty in the use of flexibilities, making them very difficult to use.

Amendment 263

Anna Zalewska, Alexandr Vondra, Roberts Zīle, Veronika Vrecionová, Sergio Berlato

Proposal for a regulation

Recital 12

Text proposed by the Commission

(12) Discontinuing the current accounting rules after 2025 creates a need for alternative provisions for natural disturbances such as fire, pest, and storms, in order to address uncertainties due to natural processes or as a result of climate change in the land use, land use change and forestry sector. A flexibility mechanism linked to natural disturbances should be available to Member States in **2032**, provided that they have exhausted all other flexibilities at their disposal, put in place appropriate measures to reduce the vulnerability of their land to such disturbances and that the achievement by the Union of the 2030 target for the land use, land use change and forestry sector is completed.

Amendment

(12) Discontinuing the current accounting rules after 2025 creates a need for alternative provisions for natural disturbances such as fire, pest, and storms, in order to address uncertainties due to natural processes or as a result of climate change in the land use, land use change and forestry sector. A flexibility mechanism linked to natural disturbances should be available to Member States in **[2032]**, provided that they have exhausted all other flexibilities at their disposal, put in place appropriate measures to reduce the vulnerability of their land to such disturbances and that the achievement by the Union of the 2030 target for the land use, land use change and forestry sector is completed.

Or. en

Justification

Flexibility mechanism for Member States should be readily available.

Amendment 264

Nicola Procaccini

Proposal for a regulation

Recital 13

Text proposed by the Commission

(13) With the setting of binding national annual targets for greenhouse gas removals based on the reported greenhouse gas emissions and removals from 2026 onwards, the rules for target compliance should be set out. The

Amendment

deleted

principles laid down in Regulation (EU) 2018/842 should apply mutatis mutandis, with a penalty for non-compliance calculated in the following way: 108% of the gap between the assigned target and the net removals reported in the given year will be added to the greenhouse gas emission figure reported in the subsequent year by the Member State.

Amendment 266
María Soraya Rodríguez Ramos, Susana Solís Pérez

Proposal for a regulation
Recital 13

Text proposed by the Commission

Amendment

(13) With the setting of binding national annual targets for greenhouse gas removals based on the reported greenhouse gas emissions and removals from 2026 onwards, the rules for target compliance should be set out. The principles laid down in Regulation (EU) 2018/842 should apply mutatis mutandis, with a penalty for non-compliance calculated in the following way: 108% of the gap between the assigned target and the net removals reported in the given year will be added to the greenhouse gas emission figure reported in the subsequent year by the Member State.

deleted

Or. en

Justification

The LULUCF sector presents numerous uncertainties that depends on unpredictable natural circumstances. With this premise, a binding linear trajectory should not be established. Instead, an indicative trajectory could be useful to Member states. Additionally, penalties should not be established as there are other mechanisms to enforce Community law in case of non-compliance in the framework of infringement procedures.

Amendment 267

César Luena, Javi López, Nicolás González Casares, Estrella Durá Ferrandis, Marcos Ros Sempere

Proposal for a regulation

Recital 13

Text proposed by the Commission

Amendment

(13) With the setting of binding national annual targets for greenhouse gas removals based on the reported greenhouse gas emissions and removals from 2026 onwards, the rules for target compliance should be set out. deleted

calculated in the following way: 108% of the gap between the assigned target and the net removals reported in the given year will be added to the greenhouse gas emission figure reported in the subsequent year by the Member State.

Or. en

Justification

Due to the high variability that characterizes the LULUCF sector, which depends on unpredictable natural circumstances, Regulation (EU) 2018/842 cannot be applied mutatis mutandis.

Amendment 268

Nils Torvalds, Emma Wiesner, Ulrike Müller, Ondřej Knotek

Proposal for a regulation

Recital 13

Text proposed by the Commission

Amendment

(13) With the setting of binding national annual targets for greenhouse gas removals based on the reported greenhouse gas emissions and removals from 2026 onwards, the rules for target compliance should be set out. The principles laid down in Regulation (EU) 2018/842 should apply mutatis mutandis, with a penalty for non-compliance calculated in the following way: 108% of the gap between the assigned target and the net removals reported in the given year will be added to the greenhouse gas emission figure reported in the subsequent year by the Member State.

deleted

Or. en

Justification

Creating a penalty system is not appropriate and it would deteriorate the cost efficiency of reaching climate targets at Member State level. Carbon sink levels in the LULUCF sector vary significantly from year to year due to fluctuation in the environment and economy. Setting a specific target for one year is not appropriate due to the nature of the sector, in

which demand is market-based and also dependent on decisions done by private land and forest owners.

Amendment 269

Inese Vaidere

Proposal for a regulation

Recital 13

Text proposed by the Commission

Amendment

(13) *With the setting of binding national annual targets for greenhouse gas removals based on the reported greenhouse gas emissions and removals from 2026 onwards, the rules for target compliance should be set out. The principles laid down in Regulation (EU) 2018/842 should apply mutatis mutandis, with a penalty for non-compliance calculated in the following way: 108% of the gap between the assigned target and the net removals reported in the given year will be added to the greenhouse gas emission figure reported in the subsequent year by the Member State.* ***deleted***

Or. en

Justification

Setting binding annual targets and determine penalties on an annual basis and cumulate them is not suitable to a sector characterized by significant variability between years. It would give negative signal and incentivise to implement short term measures which will further have a negative impact on long-term goals – EU become climate neutral by 2050 and afterwards achieving negative emissions. Forestry should be considered as a long term policy.

Amendment 270

Anna Zalewska, Alexandr Vondra, Roberts Zīle, Veronika Vrecionová

Proposal for a regulation

Recital 13

Text proposed by the Commission

Amendment

(13) With the setting of binding national annual targets for greenhouse gas removals based on the reported greenhouse gas emissions and removals from 2026 onwards, the rules for target compliance should be set out. The principles laid down in Regulation (EU) 2018/842 should apply mutatis mutandis, with a penalty for non-compliance calculated in the following way: 108% of the gap between the assigned target and the net removals reported in the given year will be added to the greenhouse gas emission figure reported in the subsequent year by the Member State.

Amendment 276

Alexander Bernhuber, Angelika Winzig, Marlene Mortler, Simone Schmiedtbauer, Dan-Ştefan Motreanu

Proposal for a regulation

Recital 13 a (new)

Text proposed by the Commission

Amendment

(13a) Achieving the ambitious targets for doubling the share of renewable energies in the Union requires an extremely dynamic expansion of all renewable energy technologies, as well as the increased use of biogenic energy sources in particular. Biogenic energy sources and especially wood make the largest contribution to the renewable energy portfolio - 60% of renewables in the EU 27 come from bioenergy, 80% of bioenergy is wood-based - and will continue to be so in the future to achieve the renewable energy targets. The increase of the storage effect within the Union should in any case be in line with a simultaneous increase of the renewable energy targets, with a significant use of biogenic energy sources such as wood.

³⁷ Regulation (EU) No 182/2011 of the European Parliament and of the Council of 16 February 2011 laying down the rules and general principles concerning mechanisms for control by Member States of the Commission's exercise of implementing powers (OJ L 55, 28.2.2011, p. 13).

Amendment

(14) In order to ensure uniform conditions for the implementation of the provisions of Regulation (EU) 2018/841 concerning the setting of the *indicative* target allocations for Member States, implementing powers should be conferred on the Commission. Those powers should be exercised in accordance with Regulation (EU) No 182/2011 of the European Parliament and of the Council³⁷.

³⁷ Regulation (EU) No 182/2011 of the European Parliament and of the Council of 16 February 2011 laying down the rules and general principles concerning mechanisms for control by Member States of the Commission's exercise of implementing powers (OJ L 55, 28.2.2011, p. 13).

Or. en

Justification

Due to the large uncertainty that carbon sinks show, such as annual fluctuations caused by the specific nature of the sector, it is not appropriate to have binding targets.

Amendment 283

Dan-Ştefan Motreanu, Norbert Lins, Henna Virkkunen, Pernille Weiss, Christophe Hansen, Jessica Polfjärd, Marian-Jean Marinescu, Marlene Mortler, Herbert Dorfmann, Deirdre Clune, Alexander Bernhuber, Liudas Mažylis, Christian Doleschal, Inese Vaidere

Amendment

(15) In view of setting out the net greenhouse gas removals targets for the Member States for the period from 2026 to 2030, the Commission should exercise a comprehensive review to verify the

greenhouse gas inventory data for the years 2021, 2022 and 2023. For this purpose, a comprehensive review should be carried out in 2025, in addition to the comprehensive reviews that the Commission is to carry out in 2027 and 2032 in accordance with Article 38 of Regulation (EU) 2018/1999.

greenhouse gas inventory data for the years 2021, 2022 and 2023. For this purpose, a comprehensive review should be carried out in 2025 ***to review the target set for 2030 and adapt it, if needed***, in addition to the comprehensive reviews that the Commission is to carry out in 2027 and 2032 in accordance with Article 38 of Regulation (EU) 2018/1999. ***Those reviews should also assess the feasibility of the 2035 target of climate neutrality in light of the in light of the Union bioeconomy, substitution of fossil fuels, social aspects and the objectives laid down in Article 194 and Article 39 TFEU and adapt it, if necessary.***

Or. en

Justification

Removals in forests and the land sector are subject to fluctuations. Even though the land sector has an enormous potential for generating natural carbon sinks, there are uncertainties regarding the estimation of the amount of sinks to be generated. For this reason there should be regular reviews to assess the process and adapt the targets if necessary. The objectives for 2030 and 2035 should take into consideration the impact on EU bioeconomy, the substitution of fossil fuels, security of bioenergy and food production.

Amendment 294

Delara Burkhardt, Günther Sidl, Sara Cerdas, Demetris Papadakis

Proposal for a regulation

Recital 16 a (new)

Text proposed by the Commission

Amendment

(16a) The Convention on Biological Diversity (CBD) provides for, among other things, the monitoring of the components of biological diversity, including those requiring conservation measures, while noting that the fundamental requirement for the conservation of biological diversity is the in-situ conservation of ecosystems and natural habitats and the maintenance and recovery of viable populations of species in their natural surroundings (recital 10 CBD); the monitoring of the effects of any categories of human activities likely to have significant adverse impacts on the conservation and sustainable use of biological diversity; and the maintenance and organisation of data derived from such monitoring (Article 7(b), (c) and (d) CBD). Provisions for monitoring the contribution of land to achieving climate neutrality should include the generation of data necessary to show the effects on those components of biodiversity that are subject to existing Union protection and

restoration requirements, those with high climate risk and those envisaged for enhancement under the Biodiversity Strategy.

Or. en

Amendment 295
Nicolae Ștefănuță

Proposal for a regulation
Recital 16 a (new)

Text proposed by the Commission

Amendment

(16a) Where new transport infrastructure is needed to better connect Europe, the land included in such planning should be assessed in terms of its potential for carbon storage capacity and biodiversity impact.

Or. en

Amendment 296
Nicolae Ștefănuță

Proposal for a regulation
Recital 16 b (new)

Text proposed by the Commission

Amendment

(16b) Current reporting by Member States is not always accurate; recurrent checks should be done using latest land monitoring technologies to identify lands that have been reported as high potential in terms of emissions reduction, but have lost their potential in time or were incorrectly identified due to the low performance of previous monitoring technologies.

Or. en

Amendment 297

César Luena, Javi López, Nicolás González Casares, Estrella Durá Ferrandis, Marcos Ros Sempere

Proposal for a regulation

Recital 17

Text proposed by the Commission

Amendment

(17) *The expected anthropogenic changes to marine and freshwaters environment use though, for instance, planned expansion of offshore energy, potential increase in aquaculture production and the increasing levels of nature protection to meet the EU Biodiversity Strategy targets will influence greenhouse gas emissions and their sequestration. Currently these emissions and removals are not included in the standard reporting tables to the UNFCCC. Subsequently to the adoption of the reporting methodology, the Commission will consider reporting on the progress, feasibility of analysis and impact of extending the reporting to marine and freshwater environment based on the latest scientific evidence of these fluxes when carrying out the review in accordance with Article 17(2) of this Regulation.* **deleted**

Or. en

Justification

Article 17(2) of this Regulation refers to the post 2030 period, exceeding the time frame of the full package. Any change in the standard reporting tables to the UNFCCC will have to be considered in the context of the LULUCF regulation as it is already included, so there is no need for including a reminder here.

Amendment 299
Manuel Bompard

Proposal for a regulation
Recital 17

Text proposed by the Commission

(17) The expected anthropogenic changes to marine and freshwaters environment use though, for instance, planned expansion of offshore energy, potential increase in aquaculture production and the increasing levels of nature protection to meet the EU

Amendment

(17) The expected anthropogenic changes to marine, ***coastal*** and freshwaters environment use though, for instance, planned expansion of offshore energy, potential increase in aquaculture production and the increasing levels of nature protection to meet the EU

Biodiversity Strategy targets will influence greenhouse gas emissions and their sequestration. Currently these emissions and removals are not included in the standard reporting tables to the UNFCCC. Subsequently to the adoption of the reporting methodology, the Commission will consider reporting on the progress, feasibility of analysis and impact of **extending the reporting to** marine and freshwater environment based on the latest scientific evidence of these fluxes when carrying out the review in accordance with Article 17(2) of this Regulation.

Biodiversity Strategy targets will influence greenhouse gas emissions and their sequestration. Currently these emissions and removals are not included in the standard reporting tables to the UNFCCC. Subsequently to the adoption of the reporting methodology, the Commission will consider reporting on the progress, feasibility of analysis and impact of **setting net removal targets for the marine, coastal** and freshwater environment based on the latest scientific evidence of these fluxes when carrying out the review in accordance with Article 17(2) of this Regulation.

Or. en

Amendment 300

Proposal for a regulation

Recital 17

Text proposed by the Commission

(17) The expected anthropogenic changes to marine and freshwaters environment use though, for instance, planned expansion of offshore energy, potential increase in aquaculture production and the increasing levels of nature protection to meet the EU Biodiversity Strategy targets will influence greenhouse gas emissions and their sequestration. Currently these emissions and removals are not included in the standard reporting tables to the UNFCCC. Subsequently to the adoption of the reporting methodology, the Commission will consider reporting on the progress, feasibility of analysis and impact of extending the reporting to marine and freshwater environment based on the latest scientific evidence of these fluxes when carrying out the review in accordance with

Amendment

(17) The expected anthropogenic changes to marine, **coastal** and freshwaters environment use though, for instance, planned expansion of offshore energy, potential increase in aquaculture production and the increasing levels of nature protection to meet the EU Biodiversity Strategy targets will influence greenhouse gas emissions and their sequestration. Currently these emissions and removals are not included in the standard reporting tables to the UNFCCC. Subsequently to the adoption of the reporting methodology, the Commission will consider reporting on the progress, feasibility of analysis and impact of extending the reporting to marine, **coastal, including deltaic wetlands**, and freshwater environment based on the latest scientific evidence of these fluxes when carrying out the review in accordance with Article 17(2)

Article 17(2) of this Regulation.

of this Regulation.

Or. en

Amendment 301

Pascal Canfin, Catherine Chabaud

Proposal for a regulation

Recital 17 a (new)

Text proposed by the Commission

Amendment

(17a) Coastal wetlands have a specific interest for Union biodiversity as well as for the outermost regions and ecosystems concerned by the Union's external action, and can trigger important greenhouse gas emission reduction as the so-called "blue carbon" ecosystems, i.e. mangroves, sea-grass and macro-algae, grasslands and saltmarshes are strong natural carbon sinks. The forthcoming legislation stemming from the Communication on Sustainable Carbon Cycles should therefore provide a clear legal framework for the enhancement of the sinks of coastal wetlands, rewarding further action thanks to the mobilisation of high climate and environment quality credits on secondary carbon market, and by including these marine and coastal ecosystems in integrated management structures to optimise the allocation of funds for regeneration.

Amendment 302

Dan-Ștefan Motreanu, Norbert Lins, Henna Virkkunen, Pernille Weiss, Christophe Hansen, Jessica Polfjård, Marian-Jean Marinescu, Marlene Mortler, Herbert Dorfmann, Deirdre Clune, Alexander Bernhuber, Liudas Mažylis, Christian Doleschal, Inese Vaidere

Proposal for a regulation

Recital 17 a (new)

Text proposed by the Commission

Amendment

(17a) Given that the changes to the accounting rules generate additional compliance costs for the land use, land use change and forestry sector, compensatory actions need to be taken in order to prevent the increase in the total level of regulatory burden. The Commission should therefore respect the "One in one out" entry into force and present, before the application of this Regulation, proposals offsetting the regulatory burdens introduced by this Regulation, through the revision or abolishment of provisions in other Union legislative acts that generate compliance costs in the affected sector.

Amendment 333
Inese Vaidere

Proposal for a regulation
Article 1 – paragraph 1 – point 1
Regulation (EU) 2018/841
Article 1 – paragraph 1 – point e

Text proposed by the Commission

Amendment

(e) commitments of Member States to take the necessary measures aiming towards the collective achievement of climate-neutrality in the Union by 2035 in the land use, land use change and forestry sector including emissions by the non-CO₂ agriculture.’; **deleted**

Or. en

Justification

It is premature to set up a framework for combined land sector (including non-CO₂ emissions from livestock and fertiliser application) for the period from 2030 and to foreseen to set annual targets. Before setting a legal proposal for the period from 2030 there is a need to prepare a comprehensive impact assessment for the Member States and necessary improvements in the monitoring, reporting and verification system. The Regulation should apply for 2030.

Amendment 334

Regulation (EU) 2018/841

Article 1 – paragraph 1 – point e

Text proposed by the Commission

Amendment

(e) commitments of Member States to take the necessary measures aiming towards the collective achievement of climate-neutrality in the Union by 2035 in the land use, land use change and forestry sector including emissions by the non-CO₂ agriculture.’; **deleted**

Or. en

Justification

A land-based sector with objectives in the LULUCF regulation from 2031 and subsequent EU neutrality in 2035 poses some doubts for formal reasons (exceeds the 2030 time frame of the full package) and substantial reasons (sinks should offset all sectors residual emissions, not just from the AGRI sector). Further analysis is needed, as potential consequences depending

on the size and behaviour of the AGRI and LULUCF sectors in the different territories could be divergent, creating some unwanted effects as decreasing incentives in agriculture to reduce emissions.

Text proposed by the Commission

(e) commitments of Member States to take the necessary measures aiming towards the collective achievement of climate-neutrality in the Union by 2035 in the land use, land use change and forestry sector including emissions by the non-CO₂ agriculture.';

Amendment

(e) commitments of Member States to take the necessary measures aiming towards the collective achievement of climate-neutrality in the Union by 2035 in the land use, land use change and forestry sector including emissions by the non-CO₂ agriculture; ***this should be in accordance with the impact assessment and with consideration of first-movers.***';

Amendment 341

Martin Hojsík, Róża Thun und Hohenstein

Proposal for a regulation

Article 1 – paragraph 1 – point 1

Regulation (EU) 2018/841

Article 1 – paragraph 1 – point e

Text proposed by the Commission

(e) commitments of Member States to take the necessary measures aiming towards the ***collective*** achievement of climate-neutrality ***in the Union*** by 2035 in the land use, land use change and forestry sector including emissions by the non-CO₂ agriculture.';

Amendment

(e) commitments of Member States to take the necessary measures aiming towards the achievement of ***their*** climate-neutrality by 2035 in the land use, land use change and forestry sector including emissions by the non-CO₂ agriculture, ***which will be based on national sub-targets ensuring fair contribution of***

efforts of all relevant sectors.’;

Or. en

Amendment 342

Nils Torvalds

Proposal for a regulation

Article 1 – paragraph 1 – point 1

Regulation (EU) 2018/841

Article 1 – paragraph 1 – point e

Text proposed by the Commission

(e) commitments of Member States to take the necessary measures aiming towards the collective achievement of climate-neutrality *in the Union* by 2035 in the land use, land use change and forestry sector including emissions by the non-CO₂ agriculture.’;

Amendment

(e) commitments of Member States to take the necessary measures aiming towards the collective achievement of climate-neutrality *at Member State level* by 2035 in the land use, land use change and forestry sector including emissions by the non-CO₂ agriculture.’;

Or. en

Amendment 343

Emma Wiesner, Nils Torvalds, Jessica Polfjård

Proposal for a regulation

Article 1 – paragraph 1 – point 1

Regulation (EU) 2018/841

Article 1 – paragraph 1 – point e

Text proposed by the Commission

(e) commitments of Member States to take the necessary measures aiming towards the *collective* achievement of climate-neutrality *in the Union* by 2035 in the land use, land use change and forestry sector including emissions by the non-CO₂ agriculture.’;

Amendment

(e) commitments of Member States to take the necessary measures aiming towards the achievement of climate-neutrality *at Member States level* by 2035 in the land use, land use change and forestry sector including emissions by the non-CO₂ agriculture.’;

Or. en

Justification

It is essential for the achievement of climate goals that each Member State commits to reducing emissions and increasing sinks. If emissions from one sector in one Member State are allowed to hide behind sinks in other sector and Member State, there will be large free rider problem.

Amendment 344

Edina Tóth

Proposal for a regulation

Article 1 – paragraph 1 – point 1

Regulation (EU) 2018/841

Article 1 – paragraph 1 – point e

Text proposed by the Commission

(e) commitments of Member States to take the necessary measures aiming towards the collective achievement of climate-neutrality in the Union **by 2035** in the land use, land use change and forestry sector including emissions by the non-CO₂ agriculture.’;

Amendment

(e) commitments of Member States to take the necessary measures aiming towards the collective achievement of climate-neutrality in the Union in the land use, land use change and forestry sector including emissions by the non-CO₂ agriculture.’;

Or. en

Article 1 – paragraph 1 – point 1
Regulation (EU) 2018/841
Article 1 – paragraph 1 – point e b (new)

Text proposed by the Commission

Amendment

(eb) targets for reducing wood harvesting levels for the period from 2026 onwards;

Or. en

Amendment 348
Manuel Bompard

Proposal for a regulation
Article 1 – paragraph 1 – point 1
Regulation (EU) 2018/841
Article 1 – paragraph 1 – point e c (new)

Text proposed by the Commission

Amendment

(ec) commitments of the relevant Union institutions and Member States to enhance and maintain natural sinks and carbon stocks in the LULUCF sector from 2031 and onwards and for reducing the greenhouse gas emissions in the agricultural sector so as to reaching the goals of the Paris Agreement, especially its Article 5(1), the Convention on Biological Diversity and ensure a sustainable and predictable long-term contribution of natural sinks and of the agricultural sector to the Union's climate-neutrality objective by 2050 at the latest and to achieving negative emissions thereafter, as set out in Regulation (EU) 2021/1119.

Or. en

Amendment 349
Manuel Bompard

Proposal for a regulation
Article 1 – paragraph 1 – point 2
Regulation (EU) 2018/841
Article 2 – paragraph 1 – point f

Text proposed by the Commission

Amendment

(f) where a Member State has notified to the Commission its intention to include such land use in the scope of its commitments pursuant to Article 4(1) by 31 December 2020, land use reported as either of the following ('managed wetland'):

deleted

- wetland remaining wetland;***
- settlement or other land, converted to wetland;***
- wetland converted to settlement or other land.***

Amendment 350
Manuel Bompard

Proposal for a regulation
Article 1 – paragraph 1 – point 2
Regulation (EU) 2018/841
Article 2 – paragraph 1 – point f

Text proposed by the Commission

(f) *where a Member State has notified to the Commission its intention to include such land use in the scope of its commitments pursuant to Article 4(1) by 31 December 2020, land use reported as either of the following ('managed wetland'):*

- *wetland remaining wetland;*
- *settlement or other land, converted to wetland;*
- *wetland converted to settlement or other land.*

Amendment

(f) **wetland remaining** wetland;

Amendment 351
Manuel Bompard

Proposal for a regulation
Article 1 – paragraph 1 – point 2
Regulation (EU) 2018/841
Article 2 – paragraph 1 – point f a (new)

Text proposed by the Commission

(fa) settlement or other land, converted to wetland;

Amendment

Amendment 352

Delara Burkhardt, Günther Sidl, Demetris Papadakis

Proposal for a regulation
Article 1 – paragraph 1 – point 2
Regulation (EU) 2018/841
Article 2 – paragraph 2 – introductory part

Text proposed by the Commission

Amendment

2. This Regulation also applies to emissions and removals of the greenhouse gases listed in Section A of Annex I, reported pursuant to Article 26(4) of Regulation (EU) 2018/1999 and occurring on the territories of Member States in the period from 2026 **to 2030**, in any of the following land reporting categories and/or sectors:

2. This Regulation also applies to emissions and removals of the greenhouse gases listed in Section A of Annex I, reported pursuant to Article 26(4) of Regulation (EU) 2018/1999 and occurring on the territories of Member States in the period from 2026 **onwards**, in any of the following land reporting categories and/or sectors:

Or. en

Amendment 354
Michał Wiezik, Róża Thun und Hohenstein

Proposal for a regulation
Article 1 – paragraph 1 – point 2
Regulation (EU) 2018/841
Article 2 – paragraph 2 – point g

Text proposed by the Commission

Amendment

(g) *harvested wood products;* *deleted*

Or. en

Justification

HWP are fine as a carbon pool within the managed forest land reporting category.. it is a category of different products to which their half life of decay applies, but which only delay emissions and at one point they start to release carbon...and in order to keep this category as "removal" we would always need to harvest at least as much to compensate for the emissions they eventually turned into. this shall not be a purpose of this Regulation.

Amendment 355

Dan-Ștefan Motreanu, Norbert Lins, Henna Virkkunen, Pernille Weiss, Christophe Hansen, Marian-Jean Marinescu, Marlene Mortler, Herbert Dorfmann, Deirdre Clune, Alexander Bernhuber, Liudas Mažylis, Christian Doleschal, Inese Vaidere

Proposal for a regulation

Article 1 – paragraph 1 – point 2

Regulation (EU) 2018/841

Article 2 – paragraph 2 – point g

Text proposed by the Commission

Amendment

(g) *harvested wood* products; (g) *carbon storage* products;

Or. en

Justification

Carbon Storage Products should already be introduced for the period 2026-2030 as they are already contributing now to the overall removal target.

Amendment 356

Sergio Berlato

Proposal for a regulation

Article 1 – paragraph 1 – point 2

Regulation (EU) 2018/841

Article 2 – paragraph 2 – point g

Text proposed by the Commission

Amendment

g) **harvested wood** products;

g) **carbon storage** products;

Amendment 369

Norbert Lins, Christophe Hansen, Marlene Mortler, Marian-Jean Marinescu, Jens Gieseke, Christian Doleschal, Alexander Bernhuber, Herbert Dorfmann, Deirdre Clune, Sven Simon

Proposal for a regulation

Article 1 – paragraph 1 – point 2

Regulation (EU) 2018/841

Article 2 – paragraph 3 a (new)

Text proposed by the Commission

Amendment

3 a. Before 2025, the Commission shall:

(a) assess the difference between the sources and cycles of biogenic and fossil methane emissions;

(b) propose a methane calculation model based on net global warming impact, rather than on emission input figures, which do not take account of the cooling

effect of reductions in cyclical methane emissions, in line with the Paris Agreement;

(c) explore the development of a methane efficiency index that would compare kilos of methane generated per unit of output produced for different agricultural products;

(d) conduct an impact assessment on the scope set out in Article 2(3) of this Regulation with regard to the objectives of Article 39 TFEU, the Union bioeconomy and the substitution of fossil fuels.

Member States shall ensure a fair distribution between the sectors through appropriate national policies. The Commission shall analyse whether the national measures lead to a fair distribution of action between the sectors and Member States, without negatively impacting security of supply, the bioeconomy, or creating displacement effects.

Or. en

Justification

The creation of a land sector, thus the combination of CO₂ and non-CO₂ emissions from LULUCF and agriculture, is coherent and leads to a holistic policy framework. With the inclusion of methane, a reassessment of short-lived biogenic greenhouse gas emissions becomes necessary. In addition, an impact assessment on food security, bioeconomy, and fossil fuel substitution must be conducted. There must be no negative impacts or leakage effects. Contributions to the 2030 target and climate neutrality should be fairly balanced among sectors and Member States.

Amendment 370 **Manuel Bompard**

Proposal for a regulation
Article 1 – paragraph 1 – point 2
Regulation (EU) 2018/841

Text proposed by the Commission

Amendment

1 a. *From 2026 onwards, taking into account the flexibilities provided for in Articles 12 and 13b, each Member State shall ensure that greenhouse gas emissions do not exceed greenhouse gas removals, calculated as the sum of total emissions and total removals on its territory in all of the land accounting categories referred to in Article 2(1).*

Or. en

Justification

The amendment aims to preserve largely the original Art. 4 of Regulation (EU) 2018/841, which for reference is as follows: "For the periods from 2021 to 2025 and from 2026 to 2030, taking into account the flexibilities provided for in Articles 12 and 13, each Member State shall ensure that emissions do not exceed removals, calculated as the sum of total emissions and total removals on its territory in all of the land accounting categories referred to in Article 2 combined, as accounted in accordance with this Regulation."

Amendment 379

Edina Tóth

Proposal for a regulation

Article 1 – paragraph 1 – point 3

Regulation (EU) 2018/841

Article 4 – paragraph 2

Text proposed by the Commission

Amendment

2. *The 2030 Union target for net greenhouse gas removals is 310 million tonnes CO₂ equivalent as a sum of the Member States targets established in accordance with paragraph 3 of this Article, and shall be based on the average of its greenhouse gas inventory data for the years 2016, 2017 and 2018.*

deleted

Each Member State shall ensure that, taking into account the flexibilities provided for in Articles 12 and 13 and 13b, the annual sum of its greenhouse gas emissions and removals on its territory

and in all of the land reporting categories referred to in Article 2(2), points (a) to (j), in each year in the period from 2026 to 2030 does not exceed the limit established by a linear trajectory, ending in 2030 on the target set out for that Member State in Annex IIa. The linear trajectory of a Member State shall start in 2022.

Or. en

Justification

Taking into consideration the decreasing sectoral carbon sinks, and that the current sequestration of the sector is about 268 million tonnes, the 310 million target under LULUCF cannot be supported.

Amendment 380

César Luena, Javi López, Nicolás González Casares, Estrella Durá Ferrandis, Marcos Ros Sempere

Proposal for a regulation

Article 1 – paragraph 1 – point 3

Regulation (EU) 2018/841

Article 4 – paragraph 2 – subparagraph 1

Text proposed by the Commission

2. The 2030 Union target for net greenhouse gas removals is 310 million tonnes CO₂ equivalent as a sum of the Member States targets established in accordance with paragraph 3 of this Article, and shall be based on the average of its greenhouse gas inventory data for the years **2016, 2017 and 2018**.

Amendment

2. The 2030 Union target for net greenhouse gas removals is 310 million tonnes CO₂ equivalent as a sum of the Member States targets established in accordance with paragraph 3 of this Article, and shall be based on the average of its greenhouse gas inventory data for the years **2018, 2019 and 2020 and each Member State's absorption potential linked to biophysical factors such as aridity and foreseen impacts of climate change on ecosystems that result on different biomass growth rates, taking into account the capacity of that Member State to improve its performance in the sector via land management practices or changes in land use that benefit the climate and biodiversity, and considering cost effectiveness (different costs per ton**

of CO₂ equivalent of such practices across member states). The proposed objectives may not be lower than the baseline representing the no debit benchmark for each Member state and emission reductions shall be prioritized.

Or. en

Justification

The expression of the target should consider the years 2018, 2019 and 2020 (best available data. The ‘managed area’ criterion is an oversimplification of the countries’ potential for contributing to the overall target, leading to incoherent goals. This distribution omits the following elements: Impacts of climate change: Objective indicators (e.g. aridity index) could be introduced in the distribution formula;• Environmental integrity: “No-debit rule” at country level must be preserved;• Cost effectiveness;• Ecosystem limitations for biodiversity reasons.

Amendment 381

María Soraya Rodríguez Ramos, Susana Solís Pérez

Proposal for a regulation

Article 1 – paragraph 1 – point 3

Regulation (EU) 2018/841

Article 4 – paragraph 2 – subparagraph 1

Text proposed by the Commission

2. The 2030 Union target for net greenhouse gas removals is 310 million tonnes CO₂ equivalent as a sum of the Member States targets established in accordance with paragraph 3 of this Article, and shall be based on the average of its greenhouse gas inventory data for the years **2016, 2017 and 2018**.

Amendment

2. The 2030 Union target for net greenhouse gas removals is 310 million tonnes CO₂ equivalent as a sum of the Member States targets established in accordance with paragraph 3 of this Article, and shall be based on the average of its greenhouse gas inventory data for the years **2018, 2019 and 2020, as well as each Member State’s natural absorption capacity linked to biophysical factors such as aridity and expected impacts of climate change on ecosystems that result on different biomass growth rates, taking into account the capacity of that Member State to improve its performance in the sector via land management practices or changes in land use that benefit the climate and biodiversity while considering**

abatement cost. The proposed objectives may not be lower than the baseline representing the no debit benchmark for each Member state and emission reductions shall be prioritized.

Or. en

Amendment 382

Anna Zalewska, Alexandr Vondra, Veronika Vrecionová

Proposal for a regulation

Article 1 – paragraph 1 – point 3

Regulation (EU) 2018/841

Article 4 – paragraph 2 – subparagraph 1

Text proposed by the Commission

2. The 2030 Union target for net greenhouse gas removals is **310** million tonnes CO₂ equivalent as a sum of the Member States targets established in accordance with paragraph 3 of this Article, **and** shall be based on the average of its greenhouse gas inventory data for the years 2016, 2017 **and 2018**.

Amendment

2. The 2030 Union target for net greenhouse gas removals is **225** million tonnes CO₂ equivalent as a sum of the **indicative** Member States targets established in accordance with paragraph 1 **and 1a** of this Article, **which, and any additional effort necessary to achieve the 2030 Union target that** shall be based on, **inter alia, where appropriate:**

- the average of its greenhouse gas inventory data for **at least** the years 2016, 2017, **2018 and 2019, as well as the most up to date data as it becomes available;**
- **country-specific challenges;**
- **the percentage of forested and managed land;**
- **other relevant factors.**

Or. en

Justification

The Climate Law states the legally binding objective of 225 Mt CO₂ eq. in sinks by 2030. Furthermore, the years 2016-2018 is insufficient as a baseline.

Amendment 383

Proposal for a regulation

Article 1 – paragraph 1 – point 3

Regulation (EU) 2018/841

Article 4 – paragraph 2 – subparagraph 1

Text proposed by the Commission

2. The 2030 Union target for net greenhouse gas removals is **310 million tonnes CO₂** equivalent ***as a*** sum of the Member States targets established in accordance with paragraph 3 of this Article, and shall be based on the average of its greenhouse gas inventory data for the years ***2016, 2017 and 2018.***

Amendment

2. The 2030 Union target for net greenhouse gas removals is equivalent ***to an increase of 15% in average greenhouse gas emissions and removals from the years 2018, 2019 and 2020, and which is equivalent to the*** sum of the Member States targets established in accordance with paragraph 3 of this Article, and shall be based on the average of its greenhouse gas inventory data for the years ***2018, 2019 and 2020 and shall be reviewed in accordance with Article 4, paragraph 4 a.***

Or. en

Justification

The current proposal sets the 2030 target at 310 million tonnes CO₂ equivalent, which represents a 15% increase of the average removals from 2016-2018. The 2030 goal however needs to be based on the latest developments. Therefore, a suitable target would be based on the average greenhouse gas emissions removals from the years 2018, 2019 and 2020. The Commission should publish the 2020 data as soon as available and make the necessary calculations for the 2030 target and Annex IIa.

Or. en

Amendment 397
Christian Doleschal, Sven Simon, Niclas Herbst, Angelika Niebler, Ralf Seekatz, Stefan Berger, Marlene Mortler

Proposal for a regulation
Article 1 – paragraph 1 – point 3

Text proposed by the Commission

2. The 2030 Union target for net greenhouse gas removals is **310** million tonnes CO₂ equivalent as a sum of the Member States targets established in accordance with paragraph 3 of this Article, and shall be based on the average of its greenhouse gas inventory data for the years 2016, 2017 and 2018.

Amendment

2. The 2030 Union target for net greenhouse gas removals is **259** million tonnes CO₂ equivalent as a sum of the Member States targets established in accordance with paragraph 3 of this Article, and shall be based on the average of its greenhouse gas inventory data for the years 2016, 2017 and 2018.

Or. en

Justification

The COM proposal sets a target of 310 million tonnes CO₂ equivalent. This amounts to a 15% increase compared to the average removals from 2016-2018. It is however important that the 2030 target takes the latest developments into account. According to Article 4.1 of Regulation 221/1110, only 225 million tonnes CO₂ equivalent can be credited to the 2030 target. Therefore, it would be in line with the Commission's ambition of a 15% increase, the EU Climate Law and overall EU climate goals to set the target at 259 mill. ton. CO₂ equivalent.

Amendment 398

Michał Wiezik, Róża Thun und Hohenstein

Proposal for a regulation

Article 1 – paragraph 1 – point 3

Regulation (EU) 2018/841

Article 4 – paragraph 2 – subparagraph 1

Text proposed by the Commission

2. The 2030 Union target for net greenhouse gas removals is **310** million tonnes CO₂ equivalent as a sum of the Member States targets established in accordance with paragraph 3 of this Article, and shall be based on the average of its greenhouse gas inventory data for the years 2016, 2017 and 2018.

Amendment

2. The 2030 Union target for net greenhouse gas removals is **430** million tonnes CO₂ equivalent as a sum of the Member States targets established in accordance with paragraph 3 of this Article, and shall be based on the average of its greenhouse gas inventory data for the years 2016, 2017 and 2018.

Or. en

Justification

The EU is increasing its climate change mitigation ambition by more than one third (from 40% to 55% emission reduction). It is considered that 310 Mton is close to a status quo not reflecting the potential of the sector, and this figure is increased by one third mirroring the increased ambition of emission reduction, resulting in a proposal of 430 Mton CO₂.

Amendment 399

Ivan David

Proposal for a regulation

Article 1 – paragraph 1 – point 3

Regulation (EU) 2018/841

Article 4 – paragraph 2 – subparagraph 1

Text proposed by the Commission

2. The 2030 Union target for net greenhouse gas removals is **310** million tonnes CO₂ equivalent as a sum of the Member States targets established in accordance with paragraph 3 of this Article, and shall be based on the average of its greenhouse gas inventory data for the years 2016, 2017 and 2018.

Amendment

2. The 2030 Union target for net greenhouse gas removals is **at least 225** million tonnes CO₂ equivalent as a sum of the Member States targets established in accordance with paragraph 3 of this Article, and shall be based on the average of its greenhouse gas inventory data for the years 2016, 2017 and 2018.

Or. en

Justification

The proposed level of an EU wide carbon removal target of 490 Mt of CO₂eq would mean leaving substantial part of the forests unmanaged and postponing necessary, well-planned forest management operations as well as reducing renewable materials needed to meet the challenge of decarbonising the European economy by substituting fossil-based materials. In addition, it brings uncertainty for investors in the view of developing and growing wood-based bioeconomy. To acknowledge the fact that forests and forest-based industries help to adapt to and mitigate climate change, the EU wide carbon removal target should be set out in a more realistic way (according to the Climate Law) and thus recognise the true climate potential of forests also after 2030. The European Climate Law sets a sink target of 225 Mt CO₂ that can be counted towards the GHG target

Amendment 400

Laura Huhtasaari, Teuvo Hakkarainen

Proposal for a regulation

Article 1 – paragraph 1 – point 3

Regulation (EU) 2018/841

Article 4 – paragraph 2 – subparagraph 2

Text proposed by the Commission

Each Member State shall **ensure** that, taking into account the flexibilities provided for in Articles 12 and 13 and 13b, the annual sum of its greenhouse gas emissions and removals on its territory and in all of the land reporting categories referred to in Article 2(2), points (a) to (j), in each year in the period from 2026 to 2030 does not exceed the limit established by a linear trajectory, ending in 2030 on the target set out for that Member State in Annex IIa. The linear trajectory of a Member State shall start in 2022.

Amendment

Each Member State shall **aim towards** that, taking into account the flexibilities provided for in Articles 12 and 13 and 13b, the annual sum of its greenhouse gas emissions and removals on its territory and in all of the land reporting categories referred to in Article 2(2), points (a) to (j), in each year in the period from 2026 to 2030 does not exceed the **indicative** limit established by a linear trajectory, ending in 2030 on the **indicative** target set out for that Member State in Annex IIa. The linear trajectory of a Member State shall start in 2022.

By 30 June 2024 each Member State may present a national contribution to the 2030 net greenhouse gas removals target referred to in paragraph 2 of this Article higher than the national target set out in Annex IIa. Such contribution may be included in the integrated national energy and climate plans submitted pursuant to Article 14 of Regulation (EU) 2018/1999.

Or. en

Amendment 401

César Luena, Javi López, Nicolás González Casares, Estrella Durá Ferrandis, María Soraya Rodríguez Ramos, Marcos Ros Sempere

Proposal for a regulation

Article 1 – paragraph 1 – point 3

Regulation (EU) 2018/841

Article 4 – paragraph 2 – subparagraph 2

Text proposed by the Commission

Each Member State shall ensure that, taking into account the flexibilities

Amendment

Each Member State shall ensure that, taking into account the flexibilities

provided for in Articles 12 and 13 and 13b, the annual sum of its greenhouse gas emissions and removals on its territory and in all of the land reporting categories referred to in Article 2(2), points (a) to (j), in each year in the period from 2026 to 2030 does not exceed the limit established by a linear trajectory, ending in 2030 on the target set out for that Member State in Annex IIa. The linear trajectory of a Member State shall start in 2022.

provided for in Articles 12 and 13 and 13b, the annual sum of its greenhouse gas emissions and removals on its territory and in all of the land reporting categories referred to in Article 2(2), points (a) to (j), in each year in the period from 2026 to 2030, ***after adjustments coming from banking and borrowing allowed in the period 2026-2030***, does not exceed the limit established by a linear trajectory, ending in 2030 on the target set out for that Member State in Annex IIa. The linear trajectory of a Member State shall start in 2022.

Or. en

Justification

Due to the high variability that characterizes the LULUCF sector, which depends on unpredictable natural circumstances, a binding linear trajectory cannot be established. Instead, an indicative trajectory could be useful to member states.

Amendment 402

Alexander Bernhuber, Angelika Winzig, Marlene Mortler, Simone Schmiedtbauer

Proposal for a regulation

Article 1 – paragraph 1 – point 3

Regulation (EU) 2018/841

Article – 4 – paragraph 2 – subparagraph 2

Text proposed by the Commission

Each Member State shall ensure that, taking into account the flexibilities provided for in Articles 12 and 13 ***and 13b***, the annual sum of its greenhouse gas emissions and removals on its territory and in all of the land reporting categories referred to in Article 2(2), points (a) to (j), in ***each year in*** the period from 2026 to 2030 does not exceed the limit established by a linear trajectory, ending in 2030 on the target set out ***for that Member State*** in Annex IIa. The linear trajectory ***of a Member State*** shall start in 2022.

Amendment

The Union shall ensure that, taking into account the flexibilities provided for in Articles 12 and 13, the annual sum of its greenhouse gas emissions and removals on its territory and in all of the land reporting categories referred to in Article 2(2), points (a) to (j), in the period from 2026 to 2030 does not exceed the limit established by a linear trajectory, ending in 2030 on the target set out in Annex IIa. The linear trajectory shall start in 2022.

Amendment 403
Sven Simon, Christian Doleschal

Proposal for a regulation
Article 1 – paragraph 1 – point 3
Regulation (EU) 2018/841
Article – 4 – paragraph 2 – subparagraph 2

Text proposed by the Commission

Each Member State shall ensure that, taking into account the flexibilities provided for in Articles 12 and 13 and 13b, the annual sum of its greenhouse gas emissions and removals on its territory and in all of the land reporting categories referred to in Article 2(2), points (a) to (j), in each year in the period from 2026 to 2030 does not exceed the limit **established by** a linear trajectory, ending in 2030 on the target set out for that Member State in Annex IIa. The linear trajectory of a Member State shall start in 2022.

Amendment

Each Member State shall ensure that, taking into account the flexibilities provided for in Articles 12 and 13 and 13b, the annual sum of its greenhouse gas emissions and removals on its territory and in all of the land reporting categories referred to in Article 2(2), points (a) to (j), in each year in the period from 2026 to 2030 does **on average** not exceed the limit, **equivalent to the cumulated values of** a linear trajectory, ending in 2030 on the target set out for that Member State in Annex IIa. The linear trajectory of a Member State shall start in 2022.

Justification

The GHG trajectories in the LULUCF sector are subject to fluctuating weather events. Hence, the methodological framework should account for necessary flexibilities and not set fixed annual targets.

Amendment 404
Dolors Montserrat

Proposal for a regulation
Article 1 – paragraph 1 – point 3
Regulation (EU) 2018/841
Article 4 – paragraph 2 – subparagraph 2

Text proposed by the Commission

Each Member State shall ensure that, taking into account the flexibilities provided for in Articles 12 **and 13** and 13b, the annual sum of its greenhouse gas emissions and removals on its territory and in all of the land reporting categories referred to in Article 2(2), points (a) to (j), in each year in the period from 2026 to 2030 does not exceed the limit established by a linear trajectory, ending in 2030 on the target set out for that Member State in Annex IIa. The linear trajectory of a Member State shall start in 2022.

Amendment

Each Member State shall ensure that, taking into account the flexibilities provided for in Articles 12, **13, 13aa** and 13b, the annual sum of its greenhouse gas emissions and removals on its territory and in all of the land reporting categories referred to in Article 2(2), points (a) to (j), in each year in the period from 2026 to 2030 does not exceed the limit established by a linear trajectory, ending in 2030 on the target set out for that Member State in Annex IIa. The linear trajectory of a Member State shall start in 2022.

Or. en

Amendment 405

Emma Wiesner, Jessica Polfjärd

Proposal for a regulation

Article 1 – paragraph 1 – point 3

Regulation (EU) 2018/841

Article 4 – paragraph 2 – subparagraph 2

Text proposed by the Commission

Each Member State shall **ensure that**, taking into account the flexibilities provided for in Articles 12 and 13 and 13b, the **annual** sum of its greenhouse gas emissions and removals on its territory and in all of the land reporting categories referred to in Article 2(2), points (a) to (j), in **each year in** the period from 2026 to 2030 does not exceed the limit established by a linear trajectory, ending in 2030 on the target set out for that Member State in Annex IIa. The linear trajectory of a Member State shall start in 2022.

Amendment

Each Member State shall **aim** taking into account the flexibilities provided for in Articles 12 and 13 and 13b, **towards** the sum of its greenhouse gas emissions and removals on its territory and in all of the land reporting categories referred to in Article 2(2), points (a) to (j), in the period from 2026 to 2030 does not exceed the **indicative** limit established by a linear trajectory, ending in 2030 on the **indicative** target set out for that Member State in Annex IIa. The linear trajectory of a Member State shall start in 2022.

Or. en

Justification

Due to the large uncertainty that carbon sinks show, such as annual fluctuations caused by the specific nature of the sector, it is not appropriate to have binding targets.

Amendment 406

Delara Burkhardt, Günther Sidl, Rovana Plumb, Demetris Papadakis

Proposal for a regulation

Article 1 – paragraph 1 – point 3

Regulation (EU) 2018/841

Article 4 – paragraph 2 – subparagraph 2

Text proposed by the Commission

Each Member State shall ensure that, taking into account the flexibilities provided for in Articles 12 **and 13** and 13b, the annual sum of its greenhouse gas emissions and removals on its territory and in all of the land reporting categories referred to in Article 2(2), points (a) to (j), in each year in the period from 2026 to 2030 does not exceed the limit established by a linear trajectory, ending in 2030 on the target set out for that Member State in Annex IIa. The linear trajectory of a Member State shall start in 2022.

Amendment

Each Member State shall ensure that, taking into account the flexibilities provided for in Articles 12 and 13b, the annual sum of its greenhouse gas emissions and removals on its territory and in all of the land reporting categories referred to in Article 2(2), points (a) to (j), in each year in the period from 2026 to 2030 does not exceed the limit established by a linear trajectory, ending in 2030 on the target set out for that Member State in Annex IIa. The linear trajectory of a Member State shall start in 2022.

Amendment 407

Nils Torvalds, Ulrike Müller

Proposal for a regulation

Article 1 – paragraph 1 – point 3

Regulation (EU) 2018/841

Article 4 – paragraph 2 – subparagraph 2

Text proposed by the Commission

Each Member State shall ensure that, taking into account the flexibilities provided for in Articles 12 and 13 and 13b, the **annual** sum of its greenhouse gas

Amendment

Each Member State shall ensure that, taking into account the flexibilities provided for in Articles 12 and 13 and 13b, the sum of its greenhouse gas emissions

emissions and removals on its territory and in all of the land reporting categories referred to in Article 2(2), points (a) to (j), ***in each year*** in the period from 2026 to 2030 does not exceed the limit established by a linear trajectory, ending in 2030 on the target set out for that Member State in Annex IIa. The linear trajectory of a Member State shall start in 2022.

and removals on its territory and in all of the land reporting categories referred to in Article 2(2), points (a) to (j), in the period from 2026 to 2030 does not exceed the limit established by a linear trajectory, ending in 2030 on the target set out for that Member State in Annex IIa. The linear trajectory of a Member State shall start in 2022.

Or. en

Justification

In order to achieve the climate targets, it is not necessary for the Commission to set annual targets for Member States. A stable and clear framework must be created to ensure Member States reach the 2030 target. Due to the annual fluctuations caused by the specific nature of the sector, such as natural disturbances or changes in the demand of the economy, the annual review is not appropriate.

Amendment 408 **Nicolae Ștefănuță**

Proposal for a regulation
Article 1 – paragraph 1 – point 3
Regulation (EU) 2018/841
Article 4 – paragraph 4 – subparagraph 2 a (new)

Text proposed by the Commission

Amendment

Each Member State shall ensure that all land to be used for transport infrastructure that has been identified as carbon-rich ecosystems, but also of ecosystems which have a lower carbon content but more extensive coverage that can provide a significant contribution to mitigate climate change is replaced by investing in creating or restoring equivalent areas elsewhere.

Or. en

Amendment 409 **Alexander Bernhuber, Petri Sarvamaa, Angelika Winzig, Marlene Mortler, Simone**

Schmiedtbauer

Proposal for a regulation

Article 1 – paragraph 1 – point 3

Regulation (EU) 2018/841

Article 4 – paragraph 3 – subparagraph 1

Text proposed by the Commission

3. The **Commission** shall **adopt implementing acts setting out the annual** targets based on the linear trajectory for net greenhouse gas removals for each Member State, for each year in the period from 2026 to 2029 in terms of tonnes CO₂ equivalent. These national trajectories shall be based on the average greenhouse gas inventory data for the years 2021, 2022 and 2023, reported by each Member State. The value of the **310** million tonnes CO₂ equivalent net removals as a sum of the targets for Member States set out in Annex IIa may be subject to a technical correction due to a change of methodology by Member States. The method for determination of the technical correction to be added to the targets of the Member States, shall be set out in **these** implementing **acts**. For the purpose of **those** implementing **acts**, the Commission shall carry out a comprehensive review of the most recent national inventory data for the years 2021, 2022 and 2023 submitted by Member States pursuant to Article 26(4) of Regulation (EU) 2018/1999.

Amendment

3. The **Member States** shall **agree on indicative** targets based on the linear trajectory for net greenhouse gas removals for each Member State, for each year in the period from 2026 to 2029 in terms of tonnes CO₂ equivalent. These **indicative** national trajectories shall be based on the average greenhouse gas inventory data for the years 2021, 2022 and 2023, reported by each Member State. The value of the **225** million tonnes CO₂ equivalent net removals as a sum of the **indicative** targets for Member States set out in Annex IIa may be subject to a technical correction due to a change of methodology by Member States. The method for determination of the technical correction to be added to the targets of the Member States, shall be set out in **an** implementing **act**. For the purpose of **that** implementing **act**, the Commission shall carry out a comprehensive review of the most recent national inventory data for the years 2021, 2022 and 2023 submitted by Member States pursuant to Article 26(4) of Regulation (EU) 2018/1999.

Or. en

Amendment 410

Delara Burkhardt, Günther Sidl

Proposal for a regulation

Article 1 – paragraph 1 – point 3

Regulation (EU) 2018/841

Article 4 – paragraph 3 – subparagraph 1

3. The Commission shall adopt **implementing acts** setting out the annual targets based on the linear trajectory for net greenhouse gas removals for each Member State, for each year in the period from 2026 to 2029 in terms of tonnes CO₂ equivalent. These national trajectories shall be based on the average greenhouse gas inventory data for the years 2021, 2022 and 2023, reported by each Member State. The value of the **310** million tonnes CO₂ equivalent net removals as a sum of the targets for Member States set out in Annex IIa may be subject to a technical correction due to a change of methodology by Member States. The method for determination of the technical correction to be added to the targets of the Member States, shall be set out in these **implementing acts**. For the purpose of those **implementing acts**, the Commission shall carry out a comprehensive review of the most recent national inventory data for the years 2021, 2022 and 2023 submitted by Member States pursuant to Article 26(4) of Regulation (EU) 2018/1999.

3. The Commission shall adopt **delegated acts in accordance with Article 16 to supplement this Regulation by setting out the annual targets for the LULUCF sector, including annual sub-targets for cropland, grassland and wetlands**, based on the linear trajectory for net greenhouse gas removals for each Member State, for each year in the period from 2026 to 2029 in terms of tonnes CO₂ equivalent. These national trajectories shall be based on the average greenhouse gas inventory data for the years 2021, 2022 and 2023, reported by each Member State. The value of the **at least 424** million tonnes CO₂ equivalent net removals as a sum of the targets for Member States set out in Annex IIa may be subject to a technical correction due to a change of methodology by Member States, **subject to independent expert review confirming the necessity and proportionality of the technical correction based on the improved accuracy of the data monitored and reported**. The method for determination of the technical correction to be added to the targets of the Member States **and for the independent expert review** shall be set out in these **delegated acts**. For the purpose of those **delegated acts**, the Commission shall carry out a comprehensive review of the most recent national inventory data for the years 2021, 2022 and 2023 submitted by Member States pursuant to Article 26(4) of Regulation (EU) 2018/1999.

Or. en

Amendment 411
Silvia Modig

Proposal for a regulation
Article 1 – paragraph 1 – point 3

Text proposed by the Commission

3. The Commission shall adopt **implementing acts** setting out the annual targets based on the linear trajectory for net greenhouse gas removals for each Member State, for each year in the period from 2026 to 2029 in terms of tonnes CO₂ equivalent. These national trajectories shall be based on the average greenhouse gas inventory data for the years 2021, 2022 and 2023, reported by each Member State. The value of the **310** million tonnes CO₂ equivalent net removals as a sum of the targets for Member States set out in Annex Iia may be subject to a technical correction due to a change of methodology by Member States. The method for determination of the technical correction to be added to the targets of the Member States, shall be set out in these **implementing acts**. For the purpose of those **implementing acts**, the Commission shall carry out a comprehensive review of the most recent national inventory data for the years 2021, 2022 and 2023 submitted by Member States pursuant to Article 26(4) of Regulation (EU) 2018/1999.

Amendment

3. The Commission shall adopt **delegated acts in accordance with Article 16 to supplement this Regulation by setting out the annual targets for the LULUCF sector, including annual sub-targets for cropland, grassland and wetlands**, based on the linear trajectory for net greenhouse gas removals for each Member State, for each year in the period from 2026 to 2029 in terms of tonnes CO₂ equivalent. These national trajectories shall be based on the average greenhouse gas inventory data for the years 2021, 2022 and 2023, reported by each Member State. The value of the **600** million tonnes CO₂ equivalent net removals as a sum of the targets for Member States set out in Annex Iia may be subject to a technical correction due to a change of methodology by Member States, **subject to independent expert review confirming the necessity and proportionality of the technical correction based on the improved accuracy of the data monitored and reported**. The method for determination of the technical correction to be added to the targets of the Member States **and for the independent expert review** shall be set out in these **delegated acts**. For the purpose of those **delegated acts**, the Commission shall carry out a comprehensive review of the most recent national inventory data for the years 2021, 2022 and 2023 submitted by Member States pursuant to Article 26(4) of Regulation (EU) 2018/1999.

Amendment 412
Manuel Bompard

Proposal for a regulation

Article 1 – paragraph 1 – point 3

Regulation (EU) 2018/841

Article 4 – paragraph 3 – subparagraph 1

Text proposed by the Commission

3. The Commission shall adopt **implementing acts** setting out the annual targets based on the linear trajectory for net greenhouse gas removals for each Member State, for each year in the period from 2026 to 2029 in terms of tonnes CO₂ equivalent. These national trajectories shall be based on the average greenhouse gas inventory data for the years 2021, 2022 and 2023, reported by each Member State. The value of the **310** million tonnes CO₂ equivalent net removals as a sum of the targets for Member States set out in Annex IIa may be subject to a technical correction due to a change of methodology by Member States. The method for determination of the technical correction to be added to the targets of the Member States, shall be set out in these **implementing acts**. For the purpose of those **implementing acts**, the Commission shall carry out a comprehensive review of the most recent national inventory data for the years 2021, 2022 and 2023 submitted by Member States pursuant to Article 26(4) of Regulation (EU) 2018/1999.

Amendment

3. The Commission shall adopt **delegated acts in accordance with Article 16 to supplement this Regulation by** setting out the annual targets **for the LULUCF sector, including annual sub-targets for cropland, grassland and wetlands and targets for reducing wood harvesting levels**, based on the linear trajectory for net greenhouse gas removals for each Member State, for each year in the period from 2026 to 2029 in terms of tonnes CO₂ equivalent. These national trajectories shall be based on the average greenhouse gas inventory data for the years 2021, 2022 and 2023, reported by each Member State. The value of the **600** million tonnes CO₂ equivalent net removals as a sum of the targets for Member States set out in Annex IIa may be subject to a technical correction due to a change of methodology by Member States, **subject to independent scientific expertise and validation**. The method for determination of the technical correction to be added to the targets of the Member States **and for the independent scientific expert review**, shall be set out in these **delegated acts and made publicly available**. For the purpose of those **delegated acts**, the Commission shall carry out a comprehensive review of the most recent national inventory data for the years 2021, 2022 and 2023 submitted by Member States pursuant to Article 26(4) of Regulation (EU) 2018/1999.

Or. en

Amendment 413

Michal Wiezik

Proposal for a regulation

Article 1 – paragraph 1 – point 3

Regulation (EU) 2018/841

Article 4 – paragraph 3 – subparagraph 1

Text proposed by the Commission

3. The Commission shall adopt **implementing** acts setting out the annual targets based on the linear trajectory for net greenhouse gas removals for each Member State, for each year in the period from 2026 to 2029 in terms of tonnes CO₂ equivalent. These national trajectories shall be based on the average greenhouse gas inventory data for the years 2021, 2022 and 2023, reported by each Member State. The value of the **310** million tonnes CO₂ equivalent net removals as a sum of the targets for Member States set out in Annex IIa may be subject to a technical correction due to a change of methodology by Member States. The method for determination of the technical correction to be added to the targets of the Member States, shall be set out in these **implementing** acts. For the purpose of those **implementing** acts, the Commission shall carry out a comprehensive review of the most recent national inventory data for the years 2021, 2022 and 2023 submitted by Member States pursuant to Article 26(4) of Regulation (EU) 2018/1999.

Amendment

3. The Commission shall adopt **delegated** acts **in accordance with Article 16 to supplement this Regulation by** setting out the annual targets based on the linear trajectory for net greenhouse gas removals for each Member State, for each year in the period from 2026 to 2029 in terms of tonnes CO₂ equivalent. These national trajectories shall be based on the average greenhouse gas inventory data for the years 2021, 2022 and 2023, reported by each Member State. The value of the **430** million tonnes CO₂ equivalent net removals as a sum of the targets for Member States set out in Annex IIa, **which themselves shall be subject to a correction reflecting the natural capacity of the respective biomes and their carbon pools to sequester and store carbon, as well** may be subject to a technical correction due to a change of methodology by Member States. The method for determination of the technical correction to be added to the targets of the Member States, shall be set out in these **delegated** acts. For the purpose of those **delegated** acts, the Commission shall carry out a comprehensive review of the most recent national inventory data for the years 2021, 2022 and 2023 submitted by Member States pursuant to Article 26(4) of Regulation (EU) 2018/1999 **and make use of the refined methodology relevant for various carbon pools pursuant to Art. 5(4) of this Regulation.**

Or. en

Justification

It is unclear whether the Commission considered the natural capacity of biomes of the EU to sequester carbon, but it seems it didn't, and merely took the area of managed land of the member states into account. this is unfair as well makes higher targets unrealistic.

Mediterranean forests can not store as much carbon as temperate forests, mineral soils of some southern biomes can not store as much as boreal organic soils, this is just physically impossible, even if we take strong restoration efforts (which should in any case be incentivised)

Amendment 414

Martin Hojsik, Nicolae Ștefănuță

Proposal for a regulation

Article 1 – paragraph 1 – point 3

Regulation (EU) 2018/841

Article 4 – paragraph 3 – subparagraph 1

Text proposed by the Commission

3. The Commission shall adopt **implementing acts** setting out the annual targets based on the linear trajectory for net greenhouse gas removals for each Member State, for each year in the period from 2026 to 2029 in terms of tonnes CO₂ equivalent. These national trajectories shall be based on the average greenhouse gas inventory data for the years 2021, 2022 and 2023, reported by each Member State. The value of the 310 million tonnes CO₂ equivalent net removals as a sum of the targets for Member States set out in Annex IIa may be subject to a technical correction due to a change of methodology by Member States. The method for determination of the technical correction to be added to the targets of the Member States, shall be set out in these **implementing acts**. For the purpose of those **implementing acts**, the Commission shall carry out a comprehensive review of the most recent national inventory data for the years 2021, 2022 and 2023 submitted by Member States pursuant to Article 26(4) of Regulation (EU) 2018/1999.

Amendment

3. The Commission shall adopt **delegated acts in accordance with Article 16 to supplement this Regulation by** setting out the annual targets based on the linear trajectory for net greenhouse gas removals for each Member State, for each year in the period from 2026 to 2029 in terms of tonnes CO₂ equivalent. These national trajectories shall be based on the average greenhouse gas inventory data for the years 2021, 2022 and 2023, reported by each Member State. The value of the 310 million tonnes CO₂ equivalent net removals as a sum of the targets for Member States set out in Annex IIa may be subject to a technical correction due to a change of methodology by Member States. Or. en

Amendment 415

César Luena, Javi López, Nicolás González Casares, Estrella Durá Ferrandis, Marcos Ros Sempere

Proposal for a regulation

Article 1 – paragraph 1 – point 3

Regulation (EU) 2018/841

Article 4 – paragraph 3 – subparagraph 1

Text proposed by the Commission

3. The Commission shall adopt implementing acts setting out the annual targets based on the linear trajectory for net greenhouse gas removals for each Member State, for each year in the period from 2026 to 2029 in terms of tonnes CO₂ equivalent. These national trajectories shall be based on the average greenhouse gas inventory data for the years 2021, 2022 and 2023, reported by each Member State. The value of the 310 million tonnes CO₂ equivalent net removals as a sum of the targets for Member States set out in Annex IIa may be subject to a technical correction due to a change of methodology by Member States. The method for determination of the technical correction to be added to the targets of the Member States, shall be set out in these implementing acts. For the purpose of those implementing acts, the Commission shall carry out a comprehensive review of the most recent national inventory data for the years 2021, 2022 and 2023 submitted by Member States pursuant to Article 26(4) of Regulation (EU) 2018/1999.

Amendment

3. The Commission shall adopt implementing acts setting out ***the Member States' share of the 310 million tonnes CO₂ equivalent net removals target in 2030 according to criteria set out in Annex IIa, as well as*** the annual targets based on the linear trajectory for net greenhouse gas removals for each Member State, for each year in the period from 2026 to 2029 in terms of tonnes CO₂ equivalent, ***allowing banking and borrowing within the period 2026-2030.*** These national trajectories shall be based on the average greenhouse gas inventory data for the years 2021, 2022 and 2023, reported by each Member State. The value of the 310 million tonnes CO₂ equivalent net removals as a sum of the targets for Member States set out in Annex IIa may be subject to a technical correction due to a change of methodology by Member States. The method for determination of the technical correction to be added to the targets of the Member States, shall be set out in these implementing acts ***which shall take into account natural processes or as a result of climate change.*** For the purpose of those implementing acts, the Commission shall carry out a comprehensive review of the most recent national inventory data for the years 2021, 2022 and 2023 submitted by Member States pursuant to Article 26(4) of Regulation (EU) 2018/1999.

Or. en

Justification

Due to the high variability that characterizes the LULUCF sector, which depends on unpredictable natural circumstances, a binding linear trajectory cannot be established. A goal for the 2026-2030 period is included here, allowing banking and borrowing within the period in order to adapt to the aforementioned variability.

Amendment 416

Laura Huhtasaari, Teuvo Hakkarainen

Or. en

Justification

It is hard to make annual reviews, due to the annual fluctuations caused by the specific nature of the sector, such as natural disturbances or changes in the demand of the economy. Also, if a Member State update their LULUCF statistics due to refined methodology, this should be reflected in the target.

Amendment

3. The Commission shall adopt implementing acts setting the linear trajectory for net greenhouse gas removals for each Member State, for the period from 2026 to 2029 in terms of tonnes CO₂ equivalent. These national trajectories shall be based on the average greenhouse gas inventory data for the years 2021, 2022 and 2023, reported by each Member State. The value of the 310 million tonnes CO₂ equivalent net removals as a sum of the targets for Member States set out in Annex IIa may be subject to a technical correction due to a change of methodology by Member States. The method for determination of the technical correction to

determination of the technical correction to be added to the targets of the Member States, shall be set out in these implementing acts. For the purpose of those implementing acts, the Commission shall carry out a comprehensive review of the most recent national inventory data for the years 2021, 2022 and 2023 submitted by Member States pursuant to Article 26(4) of Regulation (EU) 2018/1999.

be added to the targets of the Member States, shall be set out in these implementing acts. For the purpose of those implementing acts, the Commission shall carry out a comprehensive review of the most recent national inventory data for the years 2021, 2022 and 2023 submitted by Member States pursuant to Article 26(4) of Regulation (EU) 2018/1999.

Or. en

Justification

In order to achieve the climate targets, it is not necessary for the Commission to set annual targets for Member States. A stable and clear framework must be created to ensure Member States reach the 2030 target. Due to the annual fluctuations caused by the specific nature of the sector, such as natural disturbances or changes in the demand of the economy, the annual review is not appropriate.

Amendment 426 **Liudas Mažylis**

out in these implementing acts. For the purpose of those implementing acts, the Commission shall carry out a comprehensive review of the most recent national inventory data for the years 2021, 2022 and 2023 submitted by Member States pursuant to Article 26(4) of Regulation (EU) 2018/1999.

Member States, shall be set out in these implementing acts. For the purpose of those implementing acts, the Commission shall carry out a comprehensive review of the most recent national inventory data for the years 2021, 2022 and 2023 submitted by Member States pursuant to Article 26(4) of Regulation (EU) 2018/1999.

Or. en

Justification

Setting binding annual targets and determine penalties on an annual basis and cumulate them is not suitable to a sector characterized by significant variability between years. It would give negative signal and incentivise to implement short term measures which will further have a negative impact on long-term goals – EU become climate neutral by 2050 and afterwards achieving negative emissions. Forestry should be considered as a long-term policy.

Amendment 428

Christian Doleschal, Sven Simon, Niclas Herbst, Angelika Niebler, Ralf Seekatz, Stefan Berger, Marlene Mortler

Amendment

3. The Commission shall adopt implementing acts setting out the annual targets based on the linear trajectory for net greenhouse gas removals for each Member State, for each year in the period from 2026 to 2029 in terms of tonnes CO₂ equivalent. These national trajectories shall be based on the average greenhouse gas inventory data for the years 2021, 2022 and 2023, reported by each Member State. The value of the **259** million tonnes CO₂ equivalent net removals as a sum of the targets for Member States set out in Annex IIa may be subject to a technical correction due to a change of methodology by Member States. The method for determination of the technical correction to be added to the

targets of the Member States, shall be set out in these implementing acts. For the purpose of those implementing acts, the Commission shall carry out a comprehensive review of the most recent national inventory data for the years 2021, 2022 and 2023 submitted by Member States pursuant to Article 26(4) of Regulation (EU) 2018/1999.

targets of the Member States, shall be set out in these implementing acts. For the purpose of those implementing acts, the Commission shall carry out a comprehensive review of the most recent national inventory data for the years 2021, 2022 and 2023 submitted by Member States pursuant to Article 26(4) of Regulation (EU) 2018/1999.

Or. en

Justification

The COM proposal sets a target of 310 million tonnes CO2 equivalent. This amounts to a 15% increase compared to the average removals from 2016-2018. It is however important that the 2030 target takes the latest developments into account. According to Article 4.1 of Regulation 221/1110, only 225 million tonnes CO2 equivalent can be credited to the 2030 target. Therefore, it would be in line with the Commission's ambition of a 15% increase, the EU Climate Law and overall EU climate goals to set the target at 259 mill. ton. CO2 equivalent."

The value of the **310** million tonnes CO₂ equivalent net removals as a sum of the targets for Member States set out in Annex IIa may be subject to a technical correction due to a change of methodology by Member States. The method for determination of the technical correction to be added to the targets of the Member States, shall **be set** out in these implementing acts. For the purpose of those implementing acts, the Commission shall carry out a comprehensive review of the most recent national inventory data for the years 2021,

Amendment

3. The Commission shall adopt implementing acts setting out the annual targets based on the linear trajectory for net greenhouse gas removals for each Member State, for each year in the period from 2026 to 2029 in terms of tonnes CO₂ equivalent. These national trajectories shall be based on the average greenhouse gas inventory data for the years 2021, 2022 and 2023, reported by each Member State. The value of the **225** million tonnes CO₂ equivalent net removals as a sum of the targets for Member States set out in Annex IIa may be subject to a technical correction due to a change of methodology by Member States. The method for determination of the technical correction to be added to the targets of the Member States, shall **be set** out in these implementing acts. For the purpose of those implementing acts, the Commission shall carry out a comprehensive review of the most recent national inventory data for the years 2021,

2022 and 2023 submitted by Member States pursuant to Article 26(4) of Regulation (EU) 2018/1999.

2022 and 2023 submitted by Member States pursuant to Article 26(4) of Regulation (EU) 2018/1999.

Or. en

Justification

The European Climate Law sets a sink target of 225 Mt CO₂ that can be counted towards the GHG target. Member States should be closely involved in the definition of the carbon removal targets (method, data etc.) given that they know best their forest-related data and their capacity in achieving their carbon removal targets based on their national energy and climate plans. Since forest-related topics are in Member States' competence, they should not be regulated by Delegated Acts.

The Commission shall, by 31 December 2025 and on the basis of integrated national energy and climate plans submitted by each Member State pursuant to Article 14 of Regulation (EU) 2018/1999 by 30 June 2024, make proposals for the contribution of each Member State to the net emissions reduction.’;

Or. en

Justification

A land-based sector with objectives in the LULUCF regulation from 2031 and subsequent EU neutrality in 2035 poses some doubts for formal reasons (exceeds the 2030 time frame of the full package) and substantial reasons (sinks should offset all sectors residual emissions, not just from the AGRI sector). Further analysis is needed, as potential consequences depending on the size and behaviour of the AGRI and LULUCF sectors in the different territories could be divergent, creating some unwanted effects as decreasing incentives in agriculture to reduce emissions.

zero by 2035 and the Union shall achieve negative emissions thereafter. The Union and the Member States shall take the necessary measures to enable the collective achievement of the target for 2035.

The Commission shall, by 31 December 2025 and on the basis of integrated national energy and climate plans submitted by each Member State pursuant to Article 14 of Regulation (EU) 2018/1999 by 30 June 2024, make proposals for the contribution of each Member State to the net emissions reduction.’;

Or. en

Justification

It is premature to set up a framework for combined land sector (including non-CO2 emissions from livestock and fertiliser application) for the period from 2030 and to foreseen to set annual targets. Before setting a legal proposal for the period from 2030 there is a need to prepare a comprehensive impact assessment for the Member States and necessary improvements in the monitoring, reporting and verification system. The Regulation should apply for 2030.

zero by 2035 and the Union shall achieve negative emissions thereafter. The Union and the Member States shall take the necessary measures to enable the collective achievement of the target for 2035.

zero by 2035 and the Union shall achieve negative emissions thereafter. The Union and the Member States shall take the necessary **proportionate** measures to enable the collective achievement of the target for 2035, **while ensuring the achievement of the objectives set out in Article 194 and Article 39 TFEU, prioritising substitution of fossil fuels and achieving a balance between emission reductions and removals. The land based carbon removals should be available for other sectors as per EU regulatory framework for the certification of carbon removals.**

Or. en

Justification

The goal towards climate neutrality by 2035 should take into consideration the impact on EU bioeconomy, substitution of fossil fuels, security of bioenergy and food. As stated in the Communication on Sustainable Carbon Cycles, policy incentives are needed to support and upscale carbon farming. Laying out a long-term vision, including cross-sectoral linkages, encourages cost-efficient emission reductions by incentivising scalable new business models and private investments in carbon farming.

Proposal for a regulation

Article 1 – paragraph 1 – point 3

Regulation (EU) 2018/841

Article 4 – paragraph 4 – subparagraph 2

Text proposed by the Commission

Amendment

The Commission shall, by 31 December 2025 and on the basis of integrated national energy and climate plans submitted by each Member State pursuant to Article 14 of Regulation (EU) 2018/1999 by 30 June 2024, make proposals for the contribution of each Member State ***to the net emissions reduction.***’;

The Commission shall, by 31 December 2025 and on the basis of integrated national energy and climate plans submitted by each Member State pursuant to Article 14 of Regulation (EU) 2018/1999 by 30 June 2024:

(a) conduct an impact assessment of the net zero greenhouse gas emissions target for 2035 in light of the Union bioeconomy, substitution of fossil fuels, social aspects and the objectives laid down in Article 194 TFEU and Article 39 TFEU;

(b) based on the impact assessment referred to in point (a) of this subparagraph, make proposals for the contribution of each Member State in order to achieve the indicative target of

net zero in 2035, while ensuring a fair distribution among Member States;

(c) introduce a fair, market-based and voluntary compensation mechanism for a carbon certification trading system, which promotes high-quality carbon certificates that can ensure the achievement of the criteria of additionality, permanence, no double counting and authenticity to incentivise improved land management practices, resulting in enhanced carbon capture;

(d) consider decreasing sink services that arise in connection with land use changes in the area of the expansion of settlement and transportation areas separately and make sure that they are not accounted for at the expense of the sectors set out in Article 2(3) points (a) to (i);

(e) make proposals on how to include bio-energy with carbon capture and storage (BECCS) processes in carbon storage products.

Or. en

Justification

Forestry and agriculture have the possibility to become climate neutral with the right incentives and political framework. The UN Intergovernmental Panel on Climate Change (IPCC) already approached agriculture, forestry and other land use (AFOLU) together in its special report on Climate Change and Land. However, the creation of a sound political framework requires an impact assessment for proper scrutiny of concrete legislative proposals on the collective aim of achieving neutrality by 2035.

Amendment 458

Proposal for a regulation

Article 1 – paragraph 1 – point 3

Regulation (EU) 2018/841

Article 4 – paragraph 4 – subparagraph 2

Text proposed by the Commission

The Commission shall, by 31 December 2025 and on the basis of integrated national energy and climate plans submitted by each Member State pursuant to Article 14 of Regulation (EU) 2018/1999 by 30 June 2024, ***make proposals for the contribution of each Member State to the net emissions reduction.***';

Amendment

The Commission shall, by 31 December 2025 and on the basis of integrated national energy and climate plans submitted by each Member State pursuant to Article 14 of Regulation (EU) 2018/1999 by 30 June 2024:

(a) conduct an impact assessment of the net zero greenhouse gas emissions target for 2035 in light of the objectives laid down in Article 39 TFEU, the Union bioeconomy and the substitution of fossil fuels;

(b) based on the impact assessment referred to in point (a) of this subparagraph, make recommendations for Member States to design policies which equally incentivise emission removals and reductions and ensure a balance between all sectors set out in Article 2(3), points (a) to (i), in order to achieve the indicative target of net zero in 2035, while ensuring a fair distribution among Member States;

(c) introduce a fair, market-based and voluntary compensation mechanism for a carbon certification trading system, which promotes high-quality carbon certificates that can ensure the achievement of the criteria of additionality, permanence, no double counting and authenticity to incentivise improved land management practices, resulting in enhanced carbon capture;

(d) consider decreasing sink services that arise in connection with land use changes in the area of the expansion of settlement and transportation areas separately and make sure that they are not accounted for at the expense of the sectors set out in Article 2(3), points (a) to (i).

Or. en

Justification

Forestry and agriculture have the possibility to become climate neutral with the right incentives and political framework. The creation of a sound political framework requires an impact assessment. Such an assessment is essential for the proper scrutiny of concrete legislative proposals on the collective aim of achieving net zero greenhouse gas emissions by 2035. On this basis the Commission should then present plans towards climate neutrality with a fair contribution of all sectors and Member States. Incentives for additional carbon removals will help land-owners to integrate carbon farming into their daily production. A post-2035 framework should not be discussed before details of the post 2030 framework are well known.

Amendment 459

Sergio Berlato

Proposal for a regulation

Article 1 – paragraph 1 – point 3

Regulation (EU) 2018/841

Article 4 – paragraph 4 – subparagraph 2

Text proposed by the Commission

The Commission shall, by 31 December 2025 and on the basis of integrated national energy and climate plans submitted by each Member State pursuant to Article 14 of Regulation (EU) 2018/1999 by 30 June 2024, make proposals for the contribution of each Member State to the net emissions reduction.’;

Amendment

The Commission shall, by 31 December 2025 and on the basis of integrated national energy and climate plans submitted by each Member State pursuant to Article 14 of Regulation (EU) 2018/1999 by 30 June 2024:

- present an impact assessment of the 2035 net-zero greenhouse gas emissions target;*
- use the results of this assessment as a basis for creating a suitable policy framework enabling farmers and foresters to incorporate carbon sequestration on agricultural land into their production activities;*
- provide appropriate incentives for the agricultural and forestry sectors so that they have the right means with which to become climate neutral and make proposals for the contribution of each Member State to the net emissions*

reduction.';

Or. it

Amendment 460

Jan Huitema, Ulrike Müller, Emma Wiesner

Proposal for a regulation

Article 1 – paragraph 1 – point 3

Regulation (EU) 2018/841

Article 4 – paragraph 4 – subparagraph 2a

Text proposed by the Commission

Amendment

The Commission shall present in 2022 a regulatory framework with a market-based design for the certification of carbon removals through which land-users can receive direct incentives. By 31 December 2024 and every year thereafter, the Commission shall assess whether additional measures or funding is necessary to ensure the effectiveness of this framework in incentivising land-users to increase their carbon storage and to achieve the targets as set out in this regulation.

Or. en

Justification

Carbon farming schemes should be the main tool to achieve the targets as set out in this regulation. In order to achieve these targets, the Commission should evaluate their effectiveness in the context of this regulation.

Amendment 461

Sergio Berlato

Proposal for a regulation

Article 1 – paragraph 1 – point 3

Regulation (EU) 2018/841

Article 4 – paragraph 4 a (new)

Text proposed by the Commission

Amendment

4a. *Greenhouse gas removals in forests and the land sector are subject to natural fluctuations. Regular reviews are therefore needed to assess the progress made towards the collective reduction target, ensuring, if necessary, timely adaptation to those natural fluctuations.*

Amendment 462
Manuel Bompard

Proposal for a regulation
Article 1 – paragraph 1 – point 3
Regulation (EU) 2018/841
Article 4 – paragraph 4 a (new)

Text proposed by the Commission

Amendment

4 a. *The relevant Union institutions and Member States shall take all necessary measures to enhance and maintain natural sinks and carbon stocks in the LULUCF sector from 2031 and onwards so as to reaching the goals of the Paris Agreement, especially its Article 5(1), the Convention on Biological Diversity and ensure a sustainable and predictable long-term contribution of natural sinks to the Union's climate-neutrality objective by 2050 at the latest and to achieving negative emissions thereafter, as set out in Regulation (EU) 2021/1119.*

By 1 January 2025, the Commission shall, taking into account the advice of the European Scientific Advisory Board on Climate Change and the Union greenhouse gas budget set out in Regulation (EU) 2021/1119, and on the basis of the integrated national energy and climate plans submitted by Member

States by 30 June 2024 pursuant to Article 14 (2) of Regulation (EU) 2018/1999, adopt a proposal to amend this Regulation to set out Union and Member States targets for net greenhouse gas removals in land use, land use change and forestry at least for 2035, 2040, 2045 and 2050 and to set out Member States targets for greenhouse gas emissions reduction in the agricultural sector at least for 2030, 2035, 2040, 2045 and 2050, including sub-targets for methane and nitrous oxide.

Or. en

Amendment 463

Proposal for a regulation

Article 1 – paragraph 1 – point 3

Regulation (EU) 2018/841

Article 4 – paragraph 4 a (new)

Text proposed by the Commission

Amendment

4 a. Member States shall ensure that measures taken to meet their national targets as referred to in paragraph 2 do not significantly harm other Union environmental objectives, in particular Union biodiversity objectives as set out in the EU Biodiversity Strategy for 2030 and in the relevant legislation, within the meaning of Article 17 of Regulation (EU) 2020/852. The Commission is empowered to adopt delegated acts in accordance with Article 16 to supplement this Regulation by specifying common rules and methodologies to achieve the objective set out in this paragraph, including minimum criteria for the inclusion of biodiversity monitoring in National Forest Inventories or other land monitoring systems.

Or. en

Amendment 465

Sirpa Pietikäinen

Proposal for a regulation

Article 1 – paragraph 1 – point 3

Regulation (EU) 2018/841

Article 4 – paragraph 4 a (new)

Text proposed by the Commission

Amendment

4 a. Member States and the Commission shall ensure that measures taken to meet the targets do not significantly harm the environment, in particular biodiversity and ecosystems. As a part of the ‘do no substantial harm’ consideration, the Member States need to ensure that the management of the forests does not cause biodiversity loss and that it contributes to nature restoration, rewilding and increasing the diversity of the habitats.

Or. en

Amendment 466

Alexander Bernhuber, Angelika Winzig, Marlene Mortler, Simone Schmiedtbauer, Jessica Polfjård, Herbert Dorfmann, Dan-Ştefan Motreanu

Proposal for a regulation

Article 1 – paragraph 1 – point 3

Regulation (EU) 2018/841

Article 4 – paragraph 4 a (new)

Text proposed by the Commission

Amendment

4 a. The substitution effect achieved through the use of agricultural and forestry raw materials, especially wood and wood-based products, instead of fossil raw materials represents a climate protection performance of the sector and shall be recognised as such in that it shall be credited to the land use, land use change and forestry sector.

Or. en

Amendment 467

Dan-Ştefan Motreanu, Norbert Lins, Henna Virkkunen, Pernille Weiss, Christophe Hansen, Jessica Polfjård, Marian-Jean Marinescu, Marlene Mortler, Herbert Dorfmann, Deirdre Clune, Liudas Mažylis, Christian Doleschal, Inese Vaidere

Proposal for a regulation
Article 1 – paragraph 1 – point 3
Regulation (EU) 2018/841
Article 4 – paragraph 4 a (new)

Text proposed by the Commission

Amendment

4 a. The targets set out in Article 4, paragraphs 2, 3 and 4 shall be subject to reviews in 2025, 2027 and 2032 and shall be adapted if negative impacts are detected on EU bioeconomy, substitution of fossil fuels, social aspects and the objectives laid down in Article 194 and Article 39 TFEU.

Or. en

Justification

The goals towards 2030 and climate neutrality by 2035 should not come at the cost of EU bioeconomy, the substitution of fossil fuels, security of bioenergy and food production. Removals in forests and the land sector are subject to fluctuations. Regular reviews assessing the progress made towards the collective aim of net zero ensure a timely adaption to fluctuations if needed.

Amendment 480

Michal Wiezik, Róza Thun und Hohenstein

Proposal for a regulation

Article 1 – paragraph 1 – point 3 a (new)

Regulation (EU) 2018/841

Article 5 – paragraph 4 – subparagraph 1 a (new)

Text proposed by the Commission

Amendment

In Article 5, paragraph 4 the following subparagraph 1a is inserted:

“No later than one year after [the entry into force of this amending Regulation], the Commission shall adopt a delegated act setting recalibrated value of carbon stock of the main categories of primary and old-growth forests of the Union in the category of managed forest land based on the measured data.

The Commission shall use datasets provided by finalized or currently running research projects for relevant primary and old-growth forest types and shall use other Union instruments to finance the projects for forest types with data gaps. If relevant, a specialized call under Horizon Mission related to climate change mitigation and adaptation may be created for this purpose.”

Or. en

Justification

under REMOTE project, scientists established that global modelling framework underestimates carbon stock of the beech Carpathian forests. The default values underestimating the potential of these ecosystems for emission avoidance might lead to erroneous decision making related to them. This shall be remediated. We are living in the era of data, and we have to base our climate action on correct data, not on wrong hypotheses.

Amendment 481

Michal Wiezik, Róza Thun und Hohenstein, Nicolae Ștefănuță

Proposal for a regulation

Article 1 – paragraph 1 – point 3 a (new)

Regulation 2018/841

Article 5 – paragraphs 4a and 4b (new)

Text proposed by the Commission

Amendment

3 a. In Article 5 the following paragraphs are inserted:

“4a. Data collection shall be further strengthened by harmonised monitoring at Union level of the evolution in the organic carbon content of soil, the sampling protocol shall be refined and

minimal depth of soil carbon sampled shall be at least 30 cm for mineral soils and at least 60 cm for organic soils at least for the categories of forest land, cropland, wetland and grassland, by means of annual LUCAS surveys conducted by the relevant services of the European Commission.”

4b. Data collection shall be further strengthened by harmonised Union-wide monitoring framework based on the national forest inventories, by means of annual return of site-specific deadwood data. The role of deadwood acting as a carbon sink aboveground, and later contributing to creation of soil carbon thus preventing mineralisation into CO₂ shall be appropriately factored in when reporting on strength of this sink.”

Or. en

Justification

The IA reads that ‘‘Highlighting biodiversity issues in the review of the LULUCF Regulation constitutes a concrete signal for Member States to seize the opportunity for synergies between EU climate and biodiversity policies. However the proposal has a very weak link established between climate and biodiversity policy, while the potential certainly is there for bringing forward these synergies. Soil is one of the most important carbon pools, and the single most important carbon pool in various types of ecosystems, while being an important habitat as well.

Amendment 494

Laura Huhtasaari, Teuvo Hakkarainen

Proposal for a regulation

Article 1 – paragraph 1 – point 7 – point b

Regulation (EU) 2018/841

Article 9 – paragraph 2

Text proposed by the Commission

2. The Commission shall adopt delegated acts in accordance with Article 16 in order to amend paragraph 1 of this Article and Annex V by adding new categories of carbon storage products, including *harvested wood products*, that have a carbon sequestration effect, based on IPCC Guidelines as adopted by the Conference of the Parties to the UNFCCC or the Conference of the Parties serving as the Meeting of the Parties to the Paris Agreement, and ensuring environmental integrity.;

Amendment

2. ***The Commission shall by 2023 adopt delegated acts on the Guidance in cooperative approaches referred to in Article 6 paragraph 2, of the Paris Agreement, Rules, modalities and procedures for the mechanism established by article 6 paragraph 4 of the Paris Agreement and contribute with a showcase example to work programme under the framework for non-market approaches referred to in Article 6, paragraph 8 of the Paris Agreement. With this contribution to Article 6, paragraph 8 of the Paris Agreement, EU will demonstrate how EU originated ITMOs can be transferred and bookkept under the Paris Agreement article 6 rules and procedures and how this bookkeeping is harmonized with LULUCF/AFOLU bookkeeping rules and procedures.***

The Commission shall ***by 2023*** adopt delegated acts in accordance with Article 16 in order to amend paragraph 1 of this Article and Annex V by adding new categories of carbon storage products,

including *all relevant wood-based product categories* that have a carbon sequestration effect, based on IPCC Guidelines as adopted by the Conference of the Parties to the UNFCCC or the Conference of the Parties serving as the Meeting of the Parties to the Paris Agreement, and ensuring environmental integrity

Amendment 497

Dan-Ștefan Motreanu, Henna Virkkunen, Pernille Weiss, Jessica Polfjärd, Marian-Jean Marinescu, Liudas Mažylis, Christian Doleschal, Inese Vaidere

Proposal for a regulation

Article 1 – paragraph 1 – point 7 – point b

Regulation (EU) 2018/841

Article 9 – paragraph 2

Text proposed by the Commission

2. The Commission shall adopt delegated acts in accordance with Article 16 in order to amend paragraph 1 of this Article and Annex V by adding new categories of carbon storage products, including **harvested wood products**, that have a carbon sequestration effect, based on IPCC Guidelines as adopted by the Conference of the Parties to the UNFCCC or the Conference of the Parties serving as the Meeting of the Parties to the Paris Agreement, and ensuring environmental integrity.;

Amendment

2. The Commission shall **by 2025** adopt delegated acts in accordance with Article 16 in order to amend paragraph 1 of this Article and Annex V by adding new categories of carbon storage products, including **bioenergy carbon capture and all relevant bio-based product categories**, that have a carbon sequestration effect, **and by introducing a life-cycle assessment of those products, including recycled products**, based on IPCC Guidelines as adopted by the Conference of the Parties to the UNFCCC or the Conference of the Parties serving as the Meeting of the Parties to the Paris Agreement, and ensuring environmental integrity. **The Commission shall develop a methodology**

for an additional category of “Fossil Substitution Products” that calculate the positive substitution effect of carbon storage products. As a party of the Paris Agreement, the European Union shall implement Article 6 of the Paris Agreement and demonstrate how Internationally Transferred Mitigation Outcomes (ITMOs) originating from the Union are aligned with the LULUCF accounting framework;

Or. en

Justification

The climate impact of innovative bio-based products should be fully taken into account. All relevant categories should be included. Substitution effect of using renewable product should be taken into account by introducing a new category of “Fossil Substitution Products”. There is an urgent need for the EU to translate Glasgow decisions on Paris Agreement Article 6 to harmonised single market rules. The Union should remove market barriers for EU originated ITMOs.

Amendment 498

Amendment 499

Benoît Lutgen, Marian-Jean Marinescu, Cláudia Monteiro de Aguiar

Proposal for a regulation

Article 1 – paragraph 1 – point 7 – point b

Regulation (EU) 2018/841

Article 9 – paragraph 2

Text proposed by the Commission

2. The Commission shall adopt delegated acts in accordance with Article 16 in order to amend paragraph 1 of this Article and Annex V by adding new categories of carbon storage products, including harvested wood products, that have a carbon sequestration effect, based on IPCC Guidelines as adopted by the Conference of the Parties to the UNFCCC or the Conference of the Parties serving as the Meeting of the Parties to the Paris Agreement, and ensuring environmental integrity.;

Amendment

2. The Commission shall adopt delegated acts in accordance with Article 16 in order to amend paragraph 1 of this Article and Annex V by adding new categories of carbon storage products, including ***short and long-life*** harvested wood products that have a carbon sequestration effect, ***and by introducing a life cycle assessment of those products, including recycled products***, based on IPCC Guidelines as adopted by the Conference of the Parties to the UNFCCC or the Conference of the Parties serving as the Meeting of the Parties to the Paris Agreement, and ensuring environmental integrity. ***The Commission shall, in addition, develop a methodology for an additional category of “Fossil Substitution Products”. That methodology shall calculate the positive substitution effect of carbon storage products and***

assess the inclusion of bioenergy carbon capture and storage processes in carbon storage products.;

Or. en

Justification

It is not only essential to increase removals, but also to store more carbon in wood products and to substitute fossil products. Therefore, the category of “carbon storage products” should include all products, from short to long life products. As a second step, substitution effect of using renewable product should be taken into account by introducing a new category of “Fossil Substitution Products”. Additionally, the possibility of bioenergy with carbon capture and storage (BECCS) should be assessed. This is in line with UN IPCC on including all.

Amendment 500

Emma Wiesner, Nils Torvalds, Jessica Polfjärd, Ulrike Müller

Proposal for a regulation

Article 1 – paragraph 1 – point 7 – point b

Regulation (EU) 2018/841

Article 9 – paragraph 2

Text proposed by the Commission

2. The Commission shall adopt delegated acts in accordance with Article 16 in order to amend paragraph 1 of this Article and Annex V by adding new categories of carbon storage products, including harvested wood products, that have a carbon sequestration effect, based on IPCC Guidelines as adopted by the Conference of the Parties to the UNFCCC or the Conference of the Parties serving as the Meeting of the Parties to the Paris Agreement, and ensuring environmental integrity.;

Amendment

2. The Commission shall adopt delegated acts ***by...(3 months after the entry into force of this Regulation)*** in accordance with Article 16 in order to amend paragraph 1 of this Article and Annex V by adding new categories of carbon storage products, including ***bioenergy carbon capture and storage, harvested wood products and all relevant bio-based products*** that have a carbon sequestration effect, based on IPCC Guidelines as adopted by the Conference of the Parties to the UNFCCC or the Conference of the Parties serving as the Meeting of the Parties to the Paris Agreement, and ensuring environmental integrity. ***The Commission should take into account the life cycle analysis, the substitution effect, the potential of side streams and residues and the inclusion of bioenergy carbon capture, storage and utilization technologies in carbon storage***

products.;

Or. en

Justification

The LULUCF regulation must be robust and accurate. It should take into account all relevant bio products, which have carbon sequestration effects from wood construction materials to textiles and chemicals including recyclable products. In this way LULUCF encourages the substitution from fossil materials to renewables and enhances the shift towards circular bioeconomy in line with EU Bioeconomy Strategy, which benefit the climate.

Amendment 505

Ivan David

Proposal for a regulation

Article 1 – paragraph 1 – point 7 – point b

Regulation (EU) 2018/841

Article 9 – paragraph 2 – subparagraph 1 a (new)

Text proposed by the Commission

Amendment

The Commission shall, in addition, develop a methodology for an additional

category of “Fossil Substitution Products”. That methodology shall calculate the positive substitution effect of carbon storage products and assess the inclusion of bioenergy carbon capture and storage processes in carbon storage products.;

Or. en

Justification

This proposal from the report would discourage the storage of carbon in wood products and hamper the replacement of fossil-based materials by not extending the Harvested Wood Products category to other Carbon Storage Products. This approach would not support the bioeconomy nor the objective of incentivising the use of wood products over fossil materials which is a key factor in moving from high-carbon products to low-carbon forest-based products. Ideally the Commission should ensure that all relevant bio-based product categories are included in a robust and coherent framework for carbon storage and removals and develop a methodology to account for the positive substitution effects of bio-based products.
